## Erratum

The article “Imaging Lesions of the Cavernous Sinus” (2009;30:444–52) contained an incorrect figure and legend. The correct image and legend are reproduced below:

DOI 10.3174/ajnr.A1795

**Fig 5.** Meningiomas. *A*, Axial precontrast T1-weighted image shows a meningeoma that is isoattenuated to white matter involving the left CS and extending from the Meckel cave into the superior orbital fissure. *B*, Axial postcontrast T1-weighted image of the same patient shows the bulk of a homogeneously enhancing mass in the Meckel cave but extending through the porous trigeminus into the prepontine cistern. A schwannoma needs to be considered in the differential diagnosis.
