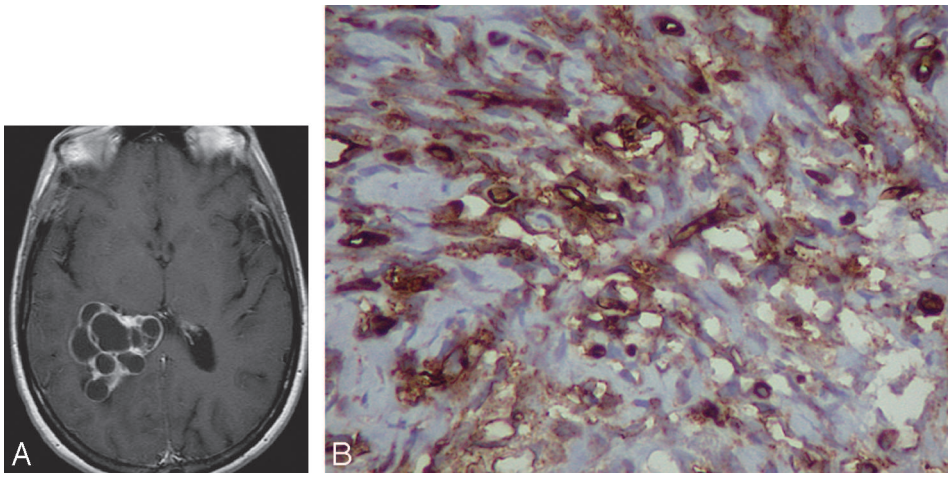

Fig 1. *A,* Axial contrast-enhanced T1-weighted image shows a multiloculated cystic solitary fibrous tumor in the right lateral ventricle.
B, Histologic examination demonstrates marked anti-CD34 immunopositivity.

that is diagnosed more frequently, especially in the cerebral ventricles. It is important to understand and recognize the protean nature and imaging polymorphism of this tumor.

Acknowledgment

We are indebted to David Seidenwurm, MD, for his help in writing this letter.

We thank the authors for commenting on our case report.[1] They present an interesting and well-documented case of a solitary fibrous tumor (SFT) in the atrium of the right lateral ventricle to add to the previous cases of intraventricular SFTs in the literature.[2] The unusual feature of their tumor was its multiloculated cystic nature with enhancing septations. Evidently, the increased awareness among pathologists of intracranial and spinal SFTs may result in the diagnosis being made more frequently. Of clinical relevance is that SFTs, though usually indolent, can behave aggressively with symptomatic recurrences requiring a second surgery or adjunctive radiation therapy.[3] Although we agree that MR imaging may have demonstrated T2 hypointensity in our case, due to the presence of calcification, it is unlikely that we could have ruled out a meningioma or a choroid plexus papilloma on that basis alone. As the authors emphasize, the MR imaging features of SFTs are so variable that it would be difficult to differentiate these tumors from meningiomas, hemangiopericytomas, or gliomas with any degree of certainty.

Erratum

We are deeply grateful to *AJNR* for publishing our article (Shouyama M, Kitabata Y, Kaku T, et al. Evaluation of Regional Cerebral Blood Flow in Fahr Disease with Schizophrenia-Like Psychosis: A Case Report. *AJNR Am J Neuroradiol* 2005;26:2527–29). Unfortunately, one of the author's names was improperly converted from Japanese to English spelling. I would like to correct the spelling as it appears in the list of authors from "Masaru Shouyama" to "Masaru Shoyama."
